

NUCLEAR Stop nuclear industry right now !

Alarm : your health is threatened

We do not want to be guinea pigs !

We live in one of the most nuclearized areas worldwide.

Traces of radioactivity in vegetable have been found as far as 40 km away from Marcoule, Tricastin or Cadarache. Tests and studies carried out in laboratories showed that radionuclide, when ingested, can trigger : **intercellular lesions, DNA lesions, possible foetus damage** (tritium crossing over the placenta protection). This, in turn, may lead to mutagen functional consequences in addition to cancer : **hereditary diseases, central nervous system disorders, cognitive alteration, testicle atrophy, immunity deficits, aging acceleration.**

Not only are your own health and that of your children involved.

*Aquelo planèto,
es pas la miéuno,
es aquelo de touti.*

Cette planète, c'est pas la mienne,
c'est celle de tous ,
celle que nous empruntons à nos enfants

NO ONE IS IN FRANCE MORE THAN 200 KM OF A NUCLEAR SITE

Even the official bodies in charge of nuclear safety and control, acknowledge that the available data are insufficient and that no proven systems can accurately measure the scope of nuclear nocivity. The recent cancer survey carried out within a 10 km area around the Tricastin nuclear plant, is blatantly insufficient : the considered area being too small, and the range of pathologies too limited.

OTHER SOLUTIONS EXIST

95% of countries on the planet and the people live, grow, progress, there are no nuclear power. France, nuclear power is an aberration.

EARTHQUAKE

All nuclear sites Marcoule Tricastin Cadarache is located on seismic fault lines and are threatened by earthquakes. Less than 10% of installations are auxnormes anti-seismic. The exorbitant cost of their eventual compliance and outdated prohibit this option.

NUCLEAR WASTE: NO SOLUTION

3000 tons, more than 1 million m3 of nuclear waste to date with the nuclear lobby does not know what to do. His solution: pass to our children and future generations by burying them underground. Criminals!
The only rational solution: we must stop producing them.

For the right to be informed, the right to live in a healthy environment :

Collectif antinucléaire 84 call on people and workers to take action

. contact us if you are a witness to suspected damage to your neighbours' or your family's health

. take part in events for the protection of your health

. join the anti-nuclear citizen group of Anti-nuclear group

Coordination Antinucléaire Sud-Est.

PERMANENT CONTAMINATION

Permanent contamination from the daily operation of nuclear plants damages your health and threatens your life.

Day after day, the military and civilian nuclear industry damages your health by permanent contamination with low dose radioactive releases into the air and rivers.

Some French official bodies (IRSN, ASN) presently confirm and acknowledge the damage to our health, while stating reports and data with systematic underestimation of this danger.

IT IS PHYSICALLY AND TECHNICALLY IMPOSSIBLE TO "TRAP" TRITIUM, A RADIOACTIVE GAS FROM INDUSTRIAL EFFLUENTS.

The nuclear lobby's solution is therefore to dilute radioactivity into water and air in order to hide it, polluting even more people over larger areas... down to the Camargue.. Tritium, Strontium 90, Plutonium, Iodine 129 can thus be found in crops and your daily food.

The precautionary principle must be applied

The precautionary principle must be applied. Not the slightest radioactive release is acceptable. We must stand up for our basic right to live in a healthy environment.

Insurers do not cover damage and nuclear threats

In case of a major nuclear accident, which likelihood increases as the facility ages, no insurance company will pay you damages. Insurance companies do not fully cover the nuclear industry : too dangerous, too hazardous, too costly.

EMPLOIS

The decommissioning of each nuclear facility, the revival of co-generation power / gas / coal low-carbon-fuel, renewable energy development will maintain and develop jobs for very long years

Stop nuclear industry right now !
